Establishment of an electronic based Alexandria Cancer Registry, Egypt

The aim of this project is to develop an evidence-based electronic based Alexandria Cancer Registry in Egypt through reviewing the electronic conversion and checking the validity, reliability, appropriateness, accuracy, timeliness, and completeness of the collected cancer data.

Specific Objectives: These are directed toward (1) setting a manual operational guidance for cancer registration according to the standards developed by the International Agency for Research on Cancer (IARC) for regular evaluation of the data quality and organizing regular training for the researchers, physicians, and health care providers for easy usage of the cancer registry databases, and (1) testing the comparability of the established Alexandria Cancer Registry to other national and international cancer registries databases, and (2) testing the comparability of the established Alexandria Cancer Registry to other national and international cancer registries databases.
